

PHARMACOLOGICAL PROPERTIES

Lincomycin has good antibacterial activity against anaerobic bacteria, such as Clostridium, Enterococcus, Streptococcus, Clostridium tetanus, Clostridium perfringens and most actinomycetes. Lincomycin mainly acts on the 50S subunit of bacterial ribosomes and affects protein synthesis by inhibiting the elongation of peptide chain.

PRODUCT FEATURES

For increase in rate of weight gain, for improved feed efficiency, and for the control of necrotic enteritis caused or complicated by Clostridium spp. or other organisms susceptible to lincomycin in broilers.

Target Species : Chickens

DOSAGE

For increase in rate of weight gain and improved feed efficiency

Lincomycin should be mixed into the complete feed supplied to broiler chickens so that the final feed contains 2 to 4 grams of lincomycin per ton of feed.

For the control of necrotic enteritis

Lincomycin should be mixed into the complete feed supplied to broiler chickens so that the final feed contains 2 grams of lincomycin per ton of feed.

Withdrawal period: Lincomycin in approved combinations with other drugs, follow the required withdrawal times for those drugs. No drug withdrawal period is required before slaughter of poultry fed lincomycin at approved concentrations (2 to 4 grams lincomycin per ton of feed).
