

## DESCRIPTION

Monens is a premix containing 100g/200g monensin per kg. Monensin is a polyether antibiotic of the ionophore group. It exerts an anticoccidial action against *Eimeria tenella*, *E. acervulina*, *E. praecox*, *E. mitis*, *E. brunetti*, *E. maxima*, *E. necatrix* in chickens. Its action is connected with the formation of lipophilic complexes with monovalent ions (sodium and potassium), making the membranes of the coccidial cells permeable to the ions mentioned.

## FEATURES

- ▶ Proven and highly effective coccidiostat
- ▶ Most effective ionophore available
- ▶ Reduced dust in premix and feed milling, and improved uniformity throughout feed

## DIRECTION FOR USE

For prevention of coccidiosis in chickens. Thoroughly mix the product into feed to obtain a concentration of 90 ~ 110 g monensin per ton of feed.

## PRECAUTIONS

1. Do not feed to laying or breeder hens in production. Do not feed to chickens over 16 weeks old.
2. Do not use the product directly. Thoroughly mix the product into feed.
3. Do not use together with Tiamulin, Oleandomycin to avoid poisoning.
4. Do not use for equines.
5. Avoid skin and eye contact.

Withdrawal Period: 5 days

Package 25kg/bag

Storage conditions: Store in a cool, dry and well-ventilated area

Shelf life: 2 years
